10'	1p	1p	1p	1p	2p	2p	2p	2p	3p	3p	3p	3p	3p	8p
8'	1p	1p	1p	1p	1p	2p	2p	2p	3p	2p	2p	3p	3p	8p

Notes regarding light arm lengths:

“P” = Panel-Vue, mounted 1’ down and 4’ out

“S” = Sign-Vue, mounted 3’ down and 6’ out

How to determine light mounting centers:

Spacing = length of board divided by number of units; i.e., 48 divided by 4 = 12’ spacing

Distance in from corner = spacing times .5; i.e., 12’ x .5 = 6’

Failure to follow these recommendations regarding light arm distance and the proper number of fixtures may result in improper light coverage of billboard.
